

# Santal

Santal has created all its ranges and assortments by putting together all ingredients that are necessary to have as a result the best quality products on fruit juices market.

Santal has developed a variety of recipes that have been adapted to the needs and desires of consumers, all of them preserving the taste, aroma and properties of the selected fruits for each assortment. Santal uses the newest and most modern technologies in the fruit juices industry in order to achieve this.

Santal products are bottled in modern and minimalist designed packaging, being both practical and functional.

Thus, Santal consolidates its leading position in the fruits juices market, remaining an innovator and, at the same time, a “must-have” for its consumers’ wellbeing.

# SANTAL RANGE - ASSORTMENTS

## JUICE 100% FRUIT

100% natural juices are obtained from fruit concentrates and/or purees, by restoring them with water addition. They are pasteurized and bottled in aseptic packaging to keep intact the initial properties and taste of fresh fruits. These juices are 100% natural, without addition of preservatives, food colorants and synthetic flavors.

## NECTAR 25%-99% FRUIT

Nectars have a high consistency, being obtained from purees and fruit juices, with addition of water, sugar and food acids, pasteurized and bottled in aseptic packaging to keep intact the initial properties and taste of fresh fruits. Nectars are natural, without addition of preservatives, food colorants and synthetic flavors.

## RED LINE

Red line range contains soft drinks obtained from juices and purees of special fruits, whose common attributes are the red color and the high content of antioxidants. The selection of fruits related to this range is one that targets both the tastiest red fruits coming from local area, but also those from other geographical areas. Red Line range does not contain preservatives and the ingredients used are of the best quality.

## ACTIVE DRINK

Santal Active Drink range comes as a functional supplement of Santal Still Drink category and contains three products: Exotic fruits & carrots, Red fruits & carrots and Oranges & carrots. This range was developed as a combination of specially selected fruits and carrots that are harmoniously mixed to obtain a perfect taste, meant to be refreshing, but also to provide vitamins and antioxidants, thus being relevant for the functional products area.

## SANTAL DUO

Santal DUO Light comes as a functional range within Santal Still Drink category, containing three products - Mango&Orange, Peach&Lemon, Orange&Maracuja. This range has been developed as a combination of two fruits, which are harmoniously mixed to obtain a perfect taste - exotic, flavored and refreshing. The idea behind the Santal Duo Light range concept was to reduce the amount of sugar added and replace it with stevia, a natural, low-calories sweetener, in order to diminish the calories intake. Thus, the three products of the range are relevant and well integrated in the functional products area.

## STILL DRINK <25% FRUIT

Still drink range contains soft drinks based on fruit juices and/or purees, with added sugar, food acids, flavors, food colorants, preservatives and water. The juices are light, refreshing and aromatic, obtained from a varied selection of fruits or fruit mixes.

## ICE TEA

Santal Ice Tea range contains soft drinks based on tea extracts and fruit juices, with a low caloric content, which are invigorating and can be consumed in any occasion. Ice Tea doses are created using tea infusion, with special technology.
